

Cybersecurity

In a Network Far, Far Away!

Mission 1

1. Mail servers for starwars.com:

```
sysadmin@UbuntuDesktop:~$ nslookup -type=MX starwars.com
Server:      8.8.8.8
Address:     8.8.8.8#53

Non-authoritative answer:
starwars.com mail exchanger = 5 alt1.aspx.l.google.com.
starwars.com mail exchanger = 5 alt2.aspmx.l.google.com.
starwars.com mail exchanger = 10 aspmx2.googlemail.com.
starwars.com mail exchanger = 10 aspmx3.googlemail.com.
starwars.com mail exchanger = 1 aspmx.l.google.com.
```

2. Explain why the Resistance isn't receiving any emails:

If the resistance has their mail servers configured to asltx.1.google.com and asltx.2.google.com, they won't be receiving any because they are going to the domains listed in question 1.

3. Suggested DNS corrections:

They need to change starwars.com mail exchanger =1 asltx.1.google.com and starwars.com mail exchanger=2 asltx.2.google.com

Mission 2

1. Sender Policy Framework (SPF) of theforce.net:

```
Used nslookup -type=txt theforce.net
Theforce.net text="v=spf1 a:mail.wise-advice.com
mx:smtp.secureserver.net include:aspmx.googlemail.com ip4:104.156.250.80
ip4:45.63.15.159 ip4:45.63.4.215 ip4:104.207.135.156 ~all"
```

2. Explain why the Force's emails are going to spam:

If the force changed the IP of their mail server to 45.23.176.21 while our network was down, now when we receive emails from them, their IP doesn't have an IP that has an spf record. Not having a SPF record would mean that our mail servers have no way of verifying if these emails are really coming from theforce.net and are classifying them as spam.

3. Suggested DNS corrections:

Theforce.net should add the information from the following to their spf record:

```
sysadmin@UbuntuDesktop:~$ nslookup -type=txt 45.23.176.21
Server:      8.8.8.8
Address:     8.8.8.8#53

Non-authoritative answer:
21.176.23.45.in-addr.arpa      name = 45-23-176-21.lightspeed.rcsntx.sbcglobal.net.

Authoritative answers can be found from:
```

In summary, their spf record SHOULD read the following to reflect the changes to their mail IP change: Theforce.net text="v=spf1 a:mail.wise-advice.com mx:smtp.secureserver.net include:aspmx.googlemail.com, 45-23-176-21.lightspeed.rcsntx.sbcglobal.net ip4:45.23.176.21 ip4:104.156.250.80 ip4:45.63.15.159 ip4:45.63.4.215 ip4:104.207.135.156

Mission 3

1. Document the CNAME records:

```
sysadmin@UbuntuDesktop:~$ nslookup -type=CNAME www.theforce.net
Server:      8.8.8.8
Address:     8.8.8.8#53

Non-authoritative answer:
www.theforce.net    canonical name = theforce.net.
```

2. Explain why the subpage `resistance.theforce.net` isn't redirecting to `theforce.net`:

CNAME acts as an alias so that one website can be pointed to another (like `fb.com` with `facebook.com`) however as you can see above there is an absence of `resistance.theforce.net`

3. Suggested DNS corrections:

`Resistance.theforce.net` should be added to the `cname` record so that all traffic sent to `resistance` will end up at `theforce.net`

Mission 4

1. Confirm the DNS records for `princessleia.site`:

```
sysadmin@UbuntuDesktop:~$ nslookup -type=ns princessleia.site
Server:      8.8.8.8
Address:     8.8.8.8#53

Non-authoritative answer:
princessleia.site    nameserver = ns26.domaincontrol.com.
princessleia.site    nameserver = ns25.domaincontrol.com.
```

2. Suggested DNS record corrections to prevent the issue from occurring again:

From the above screenshot, there is no reference to the ns2.galaxybackup.com when you query princessleia.site. If the resistance wants another layer of security should princessleia.site go down again, I would recommend adding the backup server as a name server.

Mission 5

1. Document the shortest OSPF path from Batuu to Jedha:

- a. OSPF path:

D C E F J I L Q T V then Jedha

- b. OSPF path cost:

Cost is 23

Mission 6

1. Wireless key:

```

sysadmin@UbuntuDesktop:~/Desktop$ aircrack-ng Darkside.pcap -w /usr/share/wordlists/rockyou.txt
Opening Darkside.pcap
Read 586 packets.

# BSSID          ESSID          Encryption
1 00:0B:86:C2:A4:85 linksys        WPA (1 handshake)

Choosing first network as target.

Opening Darkside.pcap
Reading packets, please wait...

Aircrack-ng 1.2 rc4
